eHealth & ELGA

We link up national health records

Services & features

- the ELGA authorization system is ELGA's main component, which is responsible for the management, supervision and monitoring of every access and request
- development of an appliance box, suitable for operation in the computing centers of the health system as gate guard against the central components
- competent support for all ELGA domain operators and registration authorities
- complete operational coordination for ELGA for all partners/computing centers
- provision of services is guaranteed via a secure health services network
- security service benefits
- high standardization and certification level

Facts & figures*

electronic health records (ELGA)

- 2 data centers – partners operating the central services and 13 areas/domain hosts
- approx. 500 million transactions p. m.
- approx. 1.2 million recorded findings p. m.
- approx. 8 million captured recipes p. m.

eHealth Portfolio:

- central authorization system including connection gateway
- health services provider (gda) index
- eHealth register service
- gda-management
- health portal
- gda-platform
- ELGA ombudsman service access

Benefits & advantages

- high-quality service provision
- synergies with other eHealth services
- secure use of health data
